

I urge the FCC to strongly reject the NAB's petition 04-160. XM/satellite radio gives me choices and quality that aren't available anywhere else. In particular, the traffic and weather channels are unique and assist me a great deal in my travels. These channels are broadcast for the listener and make navigation through the area much easier. I believe the NAB should not dictate what I can or can't listen to and I strongly urge the FCC to reject petition 04-160.
